

Mark 86 Series

Steam Tracing Temperature Regulators

The Mark 86 ambitemp regulator is designed to control steam tracing lines based on ambient temperatures. These steam tracing lines are commonly used to protect outdoor instrumentation, pipelines and tanks from freezing. The Mark 86 allows steam to flow through the tracer lines only when it is needed, and remains closed when the ambient temperature rises above a predetermined set point.

SEALED WELDED ACTUATOR (SW)

The Mark 86, like our other self-acting temperature regulators, utilizes both Jordan's sliding gate seat design and Jordan's seal-welded actuator. The sealed welded actuator (SWA) has no elastomer parts, and is utilized for its ability to provide longer lasting service. With all steel construction, there are no parts that will wear out from temperature effects. Although it is made with the same materials and design, the SWA on the Mark 86 is different from our standard sealed welded actuator. Our Jordan temperature regulators have an SWA that consists of bulb, capillary and diaphragm assembly. As the ambitemp valve is only sensing the ambient temperature, the sensing bulb and capillary are eliminated from the construction.

The Mark 86 is generally installed as a normally closed valve. As the ambient temperature falls below the set point, the valve will open, allowing steam to enter the tracing line system. The Mark 86 may also be set up as a normally open valve and stroke toward closed as the ambient temperature rises.

FEATURES

- Sealed Welded Actuator – no elastomer parts providing longer service life
- Sliding Gate Seats – features advanced sliding gate seat technology
 - Straight-through flow for reduced turbulence and quiet operation
 - Short stroke for fast response and accurate regulation
 - Easily interchangeable Cv's
 - Tight shutoff

SPECIFICATIONS

Sizes: 1/2" (DN15) through 2" (DN50)

End Connections

- Threaded – FNPT, BSPT, BSPP
- ANSI Flanges – 150#, 300#
- DIN Flanges – PN 10/16, PN 25/40
- JIS Flanges – 10K, 20K

Body Materials

- Ductile Iron
- Bronze
- Carbon Steel
- Stainless Steel

Trim Materials

- 303SS for DI, BRZ & CS body valves
- 316SS for SS body valves

Seat Materials

- Jorcote on SST – Standard
- Jorcote/Jordanic on SST – For severe service
- Chrome Plated SST – Optional

Yoke Material: Cast Iron

Stem Packing Materials

- Spring-loaded Teflon (up to 500°F, 260°C max)
- Braided (above 500°F/260°C)

Service: Steam, water, oil, gas, air and chemicals

Shutoff: ANSI Class IV

Action

- Direct (increase in temperature closes valve)
- Reverse (increase in temperature opens valve)

Body Rating: Ductile Iron up to 988 psi (68,1 bar) and 650°F (343,3°C); Carbon Steel and Stainless Steel up to 1480 psi (102 bar) and 650°F (343,3°C); Bronze up to 500 psi (34,5 bar) and 500°F (260°C) depending on specific construction. -20°F (28,9°C) temperature limit on all materials; for other temperatures, consult factory

Overheated Protection: 100°F (58°C) (above top of control range)

Cv (Kv) Values & Maximum Differential Pressures:
